## B2B Services: Data Management

There's no denying that we live in a digitized world. Every day, millions of people work, play, shop, and communicate with the help of the internet and other digital technology. And those millions of people produce a lot of data – about 1.7 megabytes a second, or 2.5 quintillion bytes each day.

The modern business is also producing plenty of data during operating hours. The average company manages over 162 terabytes of data, from press releases and financial reports to internal memos and employee records. But all too often, companies fail to invest in data management, leaving all that information vulnerable to any savvy and determined hacker that crosses its path.

## Network Management

We understand that your business has a lot of data – and therefore, it needs a large network to store, transfer, and process it. Our IT team can outfit your business with a data network equipped to handle your daily usage, no matter how many employees you have. We can help you with:

Access switching

Data center switching

Load balancing

Routing

Wireless set up

WAN optimization

## Network Management

We understand that your business has a lot of data – and therefore, it needs a large network to store, transfer, and process it. Our IT team can outfit your business with a data network equipped to handle your daily usage, no matter how many employees you have. We can help you with:

- Access switching
- Data center switching
- Load balancing
- Routing
- Wireless set up
- WAN optimization

and much more.

Additionally, our team will help your business store your data in a safe and efficient manner. We can set up public cloud-based storage for both AWS and Microsoft networks, as well as the Microsoft Azure cloud and Microsoft 365. Thanks to our services, your employees will always be able to access your data quickly and easily.

We also understand that data management means preparing for the worst. Our IT experts will help you protect your data with backups, external storage, disaster recovery measures, and other tools that will keep your data from disappearing for good – and get you back up and running quickly after a system outage.

## Data Security

While backups and other management tools can protect your data from accidents, you need some stronger precautions against hackers and other bad actors. That's where our data security comes in, ready to help you protect your data and preserve your company's private information.

Our team can test your current network for IT resiliency (the system's ability to adapt to change while protecting sensitive data). We'll run penetration tests to spot vulnerabilities in your firewalls and other security measures – and we'll create patches to eliminate those vulnerabilities. We can even set up a secure cloud system to help you store your most sensitive data, so that proprietary information doesn't accidentally end up in the wrong hands.

Finally, our data security experts will help ensure that your system (and by extension, your business) complies with all government and industry regulations. This will help you operate at the highest levels of safety and security for yourself, your employees, and your customers (and it will also help you avoid any regulatory fines). With our services, your data and your business will be safer than ever before!

## Workflow Management

Here's the trouble with data management: if you're going to do it right, it can take a lot of time. At iVision, we know that your time is valuable, and so we're happy to help you incorporate workflow management tools into your data management system.

Our workflow management services include:

- VDI
- Desktop
- Mobile
- Laptop
- SME
- eDiscovery

and much more.

Streamline your workflow with automated processes and monitoring systems that will keep an eye on your data for you. Our team can also assist with DevOps systems, giving your company better software on a faster timetable.

iVision can also help you establish a next-level digital workspace. Our IT experts can assist with custom development for business applications, endpoint management, and even system setups for your remote workers. No matter how large your team or how widespread they may be, your company will be able to operate efficiently and easily with us on your side.

## Solutions as a Service

Let's be honest: not every business owner is a tech wizard. And guess what? That's ok! At iVision, we understand that you might not be familiar with all the programs and other solutions your business needs to succeed. That's why we've taken out the guesswork for you by creating bundled solutions as a service.

Our solution bundles include:

- BaaS + DRaaS
- SOCaaS/SIEMaaS
- VMaaS
- SDMAaaS

With these solutions, your system will be able to run smoothly and effectively, free of gaps or vulnerabilities that can leave your data in a dangerous position.

# The iVision Difference

When you choose iVision for your data management services, you're getting a team of experienced, dedicated IT professionals who know how to design a solution with your unique needs in mind.

But that's not all you're getting.

Choose iVision

Yes, our team is experienced, knowledgeable, and professional, but we're also so much more. Each of our team members are constantly learning, updating their certifications, and refining their skills to stay on top in the ever-changing world of technology. When you work with our team members, you can be confident that you're working with some of the best in the industry.

Additionally, the iVision engineering team is located right here in our Atlanta offices. If you need support or have questions for us, we're right here to help you - never offshore. Our team is ready to assist you on your time schedule, and we can give you fast and effective assistance so that your system is up and running again in no time.
